

Payal Gupta . Jarvis Consulting

I am a Results-driven individual who is passionate about software development. While working in Jarvis I worked on industry-related applications using technologies like Java, SQL, Bash, Maven, Docker, REST API. I have more than two years of experience in the insurance/financial industry as an IT professional, this experience helped me to build an analytical, detail-oriented mindset and also exposed me to the work culture and methodologies followed in large-scale industry. During my Computer Science Engineering degree, I could help a non-profit organization by developing their website that helped them to raise funds, which made me more passionate about this field. Since then I have worked on front-end projects using JavaScript, HTML/CSS as well as back-end projects using Java, Python, and SQL. Due to my curiosity, I learned the latest technologies like Cloud services(AWS and GCP) along with work. Through my passion to help others by improving existing methods and enthusiasm to learn new emerging technologies, I will be a great asset to the team and will also be excited about the new upcoming opportunities.

Skills

Proficient: Java, Python, Linux/Bash, RDBMS/SQL, Agile/Scrum, Git

Competent: Docker, HTML/CSS, Maven, Selenium, BigQuery(Google Cloud Platform), Dataproc(Google Cloud Platform)

Familiar: EC2 (Amazon Web Services), Pandas, Numpy, DynamoDB, Hadoop

Jarvis Projects

Project source code: https://github.com/jarviscanada/jarvis_data_PayalGupta

Cluster Monitor [GitHub]: Implemented a Linux clustering monitoring agent to monitor, collect and analyze data from host machines in a ten node cluster over a network in a PostgreSQL database provisioned using docker container using bash scripts and crontab to automate the script's execution. Created the SQL queries for analyzing the collected data for better business decisions and resources planning.

Core Java Apps [GitHub]:

- **Twitter App:** Developed a CLI interface using MVC architecture in Java 8 for users to create, read and delete tweets through Twitter RESTful API. Performed testing using JUnit test cases(Mockito framework), Postman and deployed the application using Docker.
- **JDBC App:** Constructed the DAO implementation of retail customer orders through JDBC with PostgreSQL. Tested the CRUD data manipulation.
- **Grep App:** Implemented Grep application in Java which simulates the Linux grep command to find patterns in a file and write them into another file using IntelliJ IDE. The implemented code was then optimized using Lambda and Streams API

Springboot App [GitHub]: Not Started

Python Data Analytics [GitHub]: Not Started

Hadoop [GitHub]: Not Started

Spark [GitHub]: Not Started

Cloud/DevOps [GitHub]: Not Started

Highlighted Projects

HR Management System: Developed an HR Management System in Java using JDBC, MySQL, Servlets, JavaScript, Eclipse and MVC design pattern. The application supported both user and HR login, the user had the access to their employment details as well as the privilege to edit their information and the HR had access to view all users with privileges to add, remove and edit a user.

Professional Experiences

Software Developer, Jarvis (2020-present): Woked in an agile/Scrum team of 4 people where I was responsible for developing application using SQL, Bash, Java, Maven in Linux(CentOS and Ubuntu) and WSL and deployed them using

Docker. I diligently performed my duties as team lead and conducted the daily standups and collaborated with the team members during various scrum ceremonies.

Quality Assurance Analyst, Canada Life (2018-2020): Worked on Agile and Waterfall projects as a QA Lead. Identified test scenarios, test data, test environment, and the scope of testing to be performed based on project requirements. Created automation scripts for regression testing using a selenium-based testing framework. Created SQL queries to collect test data from different sources like Salesforce and different databases. Performed functional, integration, regression, accessibility, ETL, API testing and coordinated with teams performing non-functional testing like performance and security testing. Provided support for weekly production deployments.

Front-End Developer, Delhi Heart Institute (2015): Designed and developed the website for the hospital for their new branch to replace the previous outdated website. Coordinated with the stakeholders for the requirements and effectively translated those requirements into website design using JavaScript, PHP, HTML, and CSS.

Education

Seneca College (2018-2019), Database Application Development, Electrical and Computer Engineering

Fanshawe College (2017-2018), Software and Information Systems Testing, Electrical and Computer Engineering

G.Z.S College of Engineering and Technology (2013-2017), Computer Science Engineering, Computer Engineering

Miscellaneous

- AWS Cloud Practitioner
- Python for Data Science
- Volunteer, BANGO: Organized social events and provided support to the NGO through digital marketing and developing their website.
- Volunteer, Feeding India: Conducted awareness events to eliminate hunger and food wastage.
